Exhaustive case division for every fixed C^2 preparation
Original current–voltage germ $\mathbf{F}_\theta$
Recover unordered electrical cores $\{C_n, C_p\}$ and R_{ser} (all ranks)
Cores distinct?
yes
no
Distinct-core inverse labels, particles, sources, then electrolyte
Prepared OCP slopes
$u_n = u_p = 0$
some $u_m \neq 0$
Flat-preparation theorem complementary / mirror cases resolved
Nonzero-slope split
$\Delta_{\text{prep}} \neq 0$ or unequal κ
tied collision
Complete Q_{18} ⇒ abstract fibre $K\theta$; realizable $\mathcal{I}_{17}$; physical 5-D chart
